Draw Once & Copy
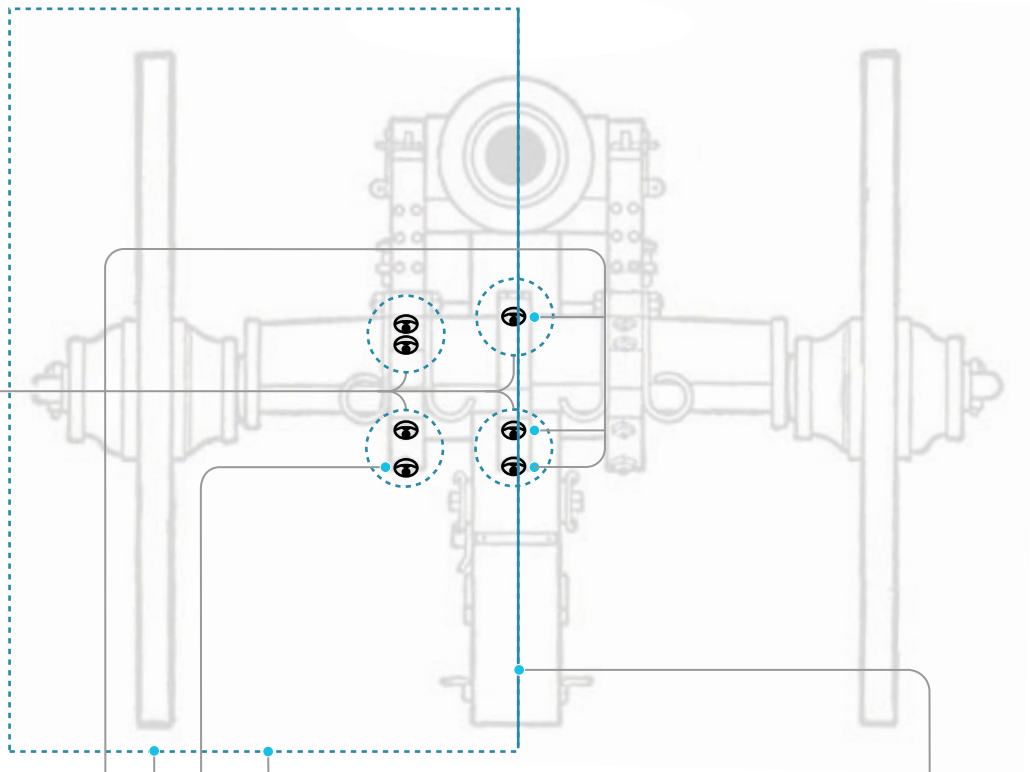

There are 11 bolts on the front view of cannon. Precision and time would both be lost if each bolt would be redrawn each time.

Instead, draw the bolt once and copy it multiple times. Ask yourself, where else on the cannon can something be drawn once and copied?

Draw only this half of the cannon.
DO NOT draw anything on the dark blue line

Draw one bolt and then copy and paste on cannon half

Copy, paste and flip the completed cannon half

Add the connecting bolts and lines
