

Keyboard Arrows

With the arrow keys you can nudge objects with more precision than dragging them with a mouse or trackpad. Select an object with the black arrow then use the keyboard arrows to nudge up, down, left or right. Select an anchor point with the white arrow, or drag over a section of anchor points with the white arrow to nudge the anchor points with the keyboard arrows.

Adjustment can be made as to just how much the keyboard arrows nudge under the Illustrator menu/Preferences/General/Keyboard Increment
