point & line to plane
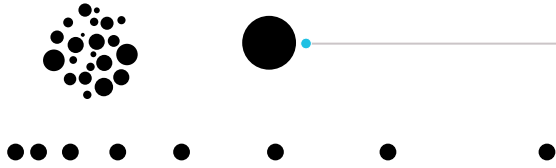

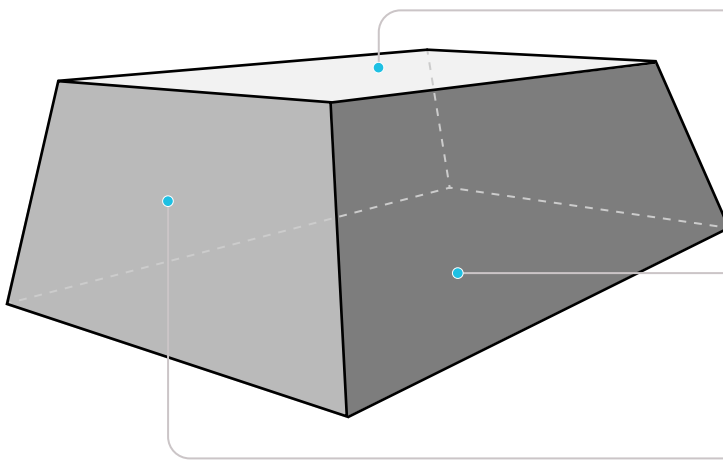

A point presents a small, brief element to the story that can add texture, focus and movement.

A line can be straight, curved, zigzagged, diagonal, vertical, horizontal, spiral or more.

A plane is a two-dimensional flat surface. The image shown to the left is a rectangular box in three-point perspective with 3 visible planes.

The light gray is the top plane.

The darkest gray is the right plane.

The medium gray is the left plane. Being able to find the planes in an object like a box or building is needed to determine perspective.
